A 35-Acre Lake Supplies Water for Constant Irrigation

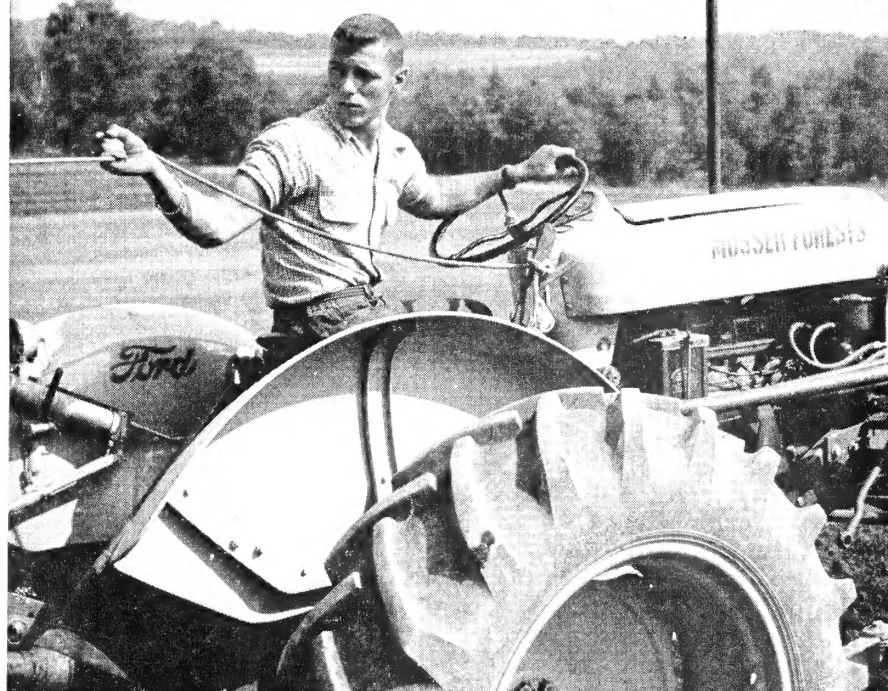

One of the Many Mussey Nurseries

We Take Pride in the Quality of our Stock

Fred Musser, Jr. Learns Mechanized Techniques

Experts Combine Experience with Modern Equipment . . .

To supply the vigorous, well-grown nursery stock in which we take pride and yet to keep abreast of ever-increasing costs of production, Musser Forests has made large investments in the most modern equipment. Many machines are specially built for particular work—grading, tilling, sanding, fertilizing and heavy hauling.

Musser offers the world's largest selection of quality trees at a price made possible through our efficient, large-quantity production.

Because of good heredity characteristics through careful selection of seed from mature, disease-resistant parent trees and scientific culture, Musser

seedlings develop a strong, extensively branched, compact root system.

The seedlings thus extract the most food from the soil of the planting site and will grow and thrive where inferior stock may fail to survive. New techniques in fertilization, spraying and handling are used to assure healthy, disease-free seedlings.

It is only through an ever-increasing list of satisfied customers through the years that Musser Forests production has grown to its present tremendous volume.

Transplanting Musser Stock for Stronger Roots

a guide for CHRISTMAS TREE growers

make idle land pay a handsome profit . . .

Develop a Profitable Business

- Over 40,000,000 Christmas Trees are used each year.
- Natural sources are rapidly shrinking and quality is poorer each year from such sources.
- Plantation Quality sheared trees ALWAYS command premium prices.
- Wholesale price in recent years, \$1.25 to \$2.00 per tree.

Planted MUSSER TREES . . .

1. Make a \$2000 investment to plant a 35-acre tract worth over \$10,000 for timber in about 30 years (\$10 per acre per year).
2. Bring cash profits by thinning Christmas trees from a forest plantation of at least \$1000 per acre (6 to 8 years).
3. Have no restrictions as to selling for Christmas trees or lumber.
4. Are a cash crop requiring no cultivation.
5. Are always at the top of the Christmas tree market.
6. Will increase value of property if it is being held for resale.
7. Act as an inflation-proof savings account, paying a high rate of interest.
8. Pay for a college education for your children if started early and properly managed.
9. Bring idle agricultural land into profitable production.
10. Improve soil by retaining moisture, preventing erosion, and restoring fertility.

Planted Trees are Preferred

The demand for Christmas trees grows as new homes increase. The market is tremendous.

Planted Trees are rapidly replacing the lower quality wild trees. Plantation trees are better shaped, reach the customer fresh, their color is richer and they retain needles longer. Musser seedlings, grown from the best strains, produce beautiful, compact, premium trees with a minimum of shearing. Their heavier branches make them very easy to decorate. Customers prefer these quality planted trees and will pay a premium price.

Plant a Variety of Species

A solid stand of Pine, Spruce, or Fir is satisfactory, but a mixture of species often permits more economical use of land. With a variety of species you will no doubt make additional sales. Also different species have different rates of growth, making it possible to harvest more crops from the same plantation. In mixed plantings a ratio of 80% Pines to 20% short-needle trees is very satisfactory. You should also consider your particular soil and climatic conditions.

Best Species for Site Conditions

Dry Areas: Scotch, Red, Austrian and White Pine.

Moist Areas: Norway and White Spruce, Balsam, Douglas and Concolor Fir. (Concolor Fir must be planted on well-drained locations only.)

Poorly Drained Areas: White Pine.

Industrial Fume Areas: Austrian Pine.

Space Trees Properly for Greater Profit

Growing trees spaced too close induces height growth but tends to make the trees thin and poor for Christmas Trees.

Spaced properly, they do not interfere with each other and still make economical use of all the land.

An average spacing is 4 to 5 feet for Spruce and 5 to 6 feet for Pines (or 4½ to 5 feet when shearing). Rows should be evenly spaced for convenience in shearing and harvesting. Access roads are desirable within 100 feet of any tree.

Number of trees required per acre using different spacings.

3 x 3 feet...4840 4 x 4 feet...2722 5 x 5 feet...1742

Estimate an average of 2000 pines per acre and 3000 Spruce per acre.

RECOMMENDED SPECIES AND SIZES FOR Christmas Tree Planting

SCOTCH PINE

AUSTRIAN PINE

WHITE PINE

NORWAY-
WHITE SPRUCE

SPECIAL STRAIN SCOTCH PINE

In greatest demand in many areas. One of the most rapid-growing species. Brings top price, especially when sheared. Musser Special Strain Scotch Pine retains its blue-green or silvery green color in cold weather. Needles are 1½ to 2½ inches long, curved.

		Per 100	Per 1000
2-yr. Seedlings.....	(2-0) 3- 6 in.	\$5.00	\$25.00
2-yr. Seedlings.....	(2-0) 4- 8 in.	6.00	30.00
2-yr. Seedlings.....	(2-0) 5-10 in.	7.00	35.00
4-yr. Transplants.....	(2-2) 8-12 in.	20.00	100.00

AUSTRIAN PINE

Will do well where fumes bother other species. Very dark green needles, 3½ to 7 inches long. Bushy trees, strong branches. Will grow where most of top soil is gone. Increasingly in demand.

2-yr. Seedlings.....	(2-0) 3- 6 in.	5.00	25.00
3-yr. Seedlings.....	(3-0) 5-10 in.	7.00	35.00
3-yr. Seedlings.....	(3-0) 8-12 in.	9.00	45.00

WHITE PINE

Very adaptable as to soil, and will do better on heavy, wet soils than the other Pines. Very soft, silver-green needles 2½ to 5 inches long. Needs shearing to be really compact. Favored in many areas.

3-yr. Seedlings.....	(3-0) 4- 8 in.	7.00	35.00
3-yr. Seedlings.....	(3-0) 6-12 in.	9.00	45.00

AMERICAN RED PINE

A rapid-growing, bushy tree, very popular. Dark green, soft needles, 4 to 5 inches long. Many buyers like it as well as Scotch Pine.

3-yr. Seedlings.....	(3-0) 5-10 in.	7.00	35.00
3-yr. Seedlings.....	(3-0) 8-12 in.	9.00	45.00
4-yr. Transplants.....	(3-1) 5-10 in.	13.00	65.00

MUSSER EXCLUSIVE NORWAY SPRUCE (Fast Growing)

Most rapid-growing and popular Spruce. This short-needed tree should be sheared when making most rapid growth to insure bushy trees. Cut as late as possible.

2-yr. Seedlings.....	(2-0) 5-10 in.	7.00	35.00
3-yr. Seedlings.....	(3-0) 10-14 in.	10.00	50.00
4-yr. Transplants.....	(3-1) 10-12 in.	20.00	100.00

WHITE SPRUCE

Similar to Norway Spruce but with more definite fragrance. Good in highland areas. Fine color and form.

2-yr. Seedlings.....	(2-0) 4- 8 in.	5.00	25.00
3-yr. Seedlings.....	(3-0) 5-10 in.	7.00	35.00
3-yr. Seedlings.....	(3-0) 8-12 in.	9.00	45.00
4-yr. Transplants.....	(3-1) 6-10 in.	15.00	75.00

COLORADO BLUE SPRUCE

Highly regarded for bluish color and bushy, symmetrical form. Needles hold somewhat better than Norway or White Spruce. If moist, will grow on sandier or heavier soils than most Spruce. Slow growing, but is a premium Christmas tree.

3-yr. Seedlings.....	(3-0) 4- 8 in.	9.00	45.00
3-yr. Seedlings.....	(3-0) 6-10 in.	12.00	60.00

DOUGLAS FIR

Compact, pyramidal form, with short, bluish green needles. Easily transplanted. Thrives in rather light soil. Our strain is selected for its hardiness. Fine for Christmas and ornamental tree.

2-yr. Seedlings.....	(2-0) 5-10 in.	7.00	35.00
3-yr. Seedlings.....	(3-0) 8-12 in.	11.00	55.00

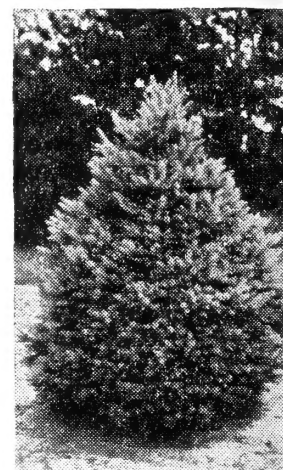

CONCOLOR FIR

Well-drained ground only.

3-yr. Seedlings.....	(3-0) 4- 8 in.	13.00	65.00

PLANTING MACHINES AND TEAM OF PLANTERS AT WORK ON LARGE PLANTING AREA

When to Plant

Spring planting, March 15 to May 15, is generally considered most satisfactory.

Fall planting season is September 1 to November 1, or until ground freezes. Fall planting is satisfactory if planting site is not unusually wet and larger planting stock is used.

Do not plant on moist sites in fall, for frost action will heave plant out of the ground. Moderate climates: plant in regular planting seasons.

Preparation for Planting

Preparation of soil is unnecessary. Plowing before planting may cause too much settling after planting, leaving trees lying on the surface. Light sod and weeds conserve moisture and shade for young trees during hot months. Do not use dry fertilizer before, during or immediately after planting . . . it may burn the tender roots.

How to Plant

When Planting by Hand: Carry seedlings in a water bucket containing mixture of thin mud to form a protective covering over roots and prevent drying out during planting. Remove one plant at a time. A mattock is the best tool in hard or rocky soil, or a spade if soil is relatively free of stones. Hole should be deep and wide enough to allow for spread of roots. Tree should stand as deep or preferably $\frac{1}{2}$ to $\frac{3}{4}$ in. deeper than it was in the nursery. Don't crowd roots. Close the hole, forcing soil tight against roots with heel, causing a slight depression to catch rain water.

Machine Planting: Tree-planting machines are satisfactory when planting 50,000 or more trees per year. We find Rootspreed planter most satisfactory. It can be purchased from us for about \$350. Owners of tree-planting machines in your area may contract to plant your trees.

When Trees Arrive

When trees arrive, *unpack at once*. While trees are out of the ground, handle carefully. Do not expose roots to sunlight or drying winds. Your trees will come packed in crates or cartons, roots wrapped in moist material, tops dry.

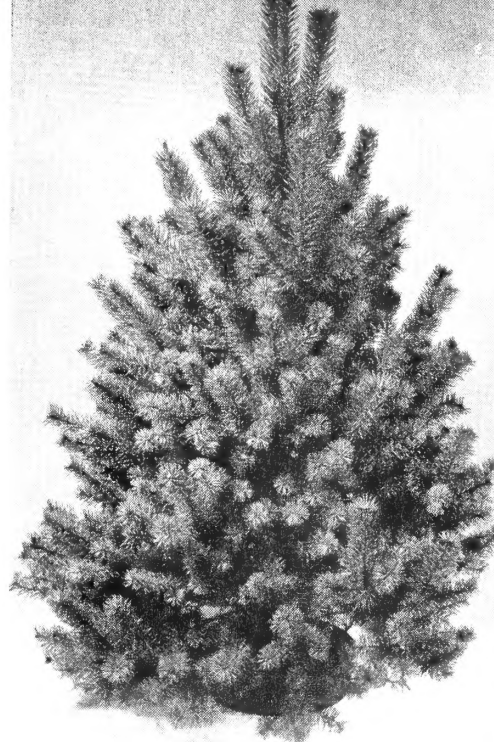

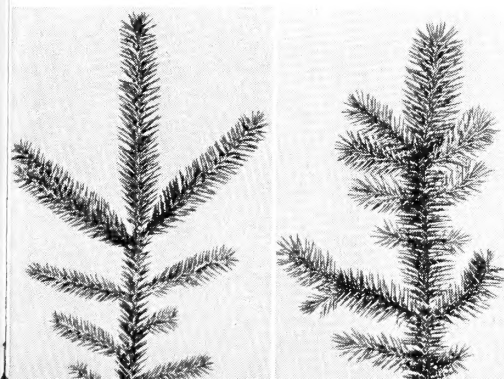

Heeling in. Dig a V-shaped trench (see illustration) deep enough to accommodate the roots and long enough to hold the trees. Trench should be near the planting site in shaded location and accessible to water if possible.

Remove all packing material, open bundles and place trees in trench, packing loose soil tightly around roots to exclude air.

Shear Trees to Increase Value

Shearing or pruning is recommended for all varieties of Pine and is usually done on Spruce. It develops a premium tree—dense, heavy, bushy and commands highest price. Start shearing about the third or fourth year when new buds are fully formed but before the new tender growth starts to get tough and woody. For Pines shear between June 1 and July 15—Spruce and Fir in late June, through to winter.

Trim off new growth of the leader (main stem), leaving it 10 to 12 in. Trim new growth of side branches where necessary, so height will equal about $1\frac{1}{2}$ times width. This will produce symmetrical shape (see diagram). Do not prune the year the tree is to be harvested.

Harvesting

When some trees are of suitable size, they should be cut and marketed. The following year more will be ready. A Christmas Tree plantation may be cut over a period of ten years, depending on the species planted.

Selling Your Tree Crop

Some growers market their trees on the ground at retail. Customer selects the tree, you cut it, he takes it home. Or you may wholesale trees on the stump to a dealer. Or you may cut them and send them to a city market.

See Planting List and Quantity Prices in center pages of this catalog.

PLANT MUSSER QUALITY TREES
the result: trees that bring top prices

FRUIT TREES

dwarf fruit

Where space is limited, plant these dwarf trees. They do not spread more than 10 to 15 feet. Most varieties start producing fruit the first year after planting. Fruit is as large or larger than standard trees. **PLANT TWO OR MORE VARIETIES FOR POLLINATION.**

DWARF APPLE TREES (3 to 4 ft.)

Select, branched. Cortland, Red McIntosh, Double Red Delicious, Yellow Delicious. (Descriptions below).

WRITE FOR SPECIAL QUANTITY PRICES

EARLY MCINTOSH. Ripens in August. Bright red, early Apple. The flesh is white, tender and juicy, with fine flavor. Ideal dessert Apple.

STAYMAN'S WINESAP. Comes into bearing young. A reliable cropper with medium to large-sized fruit. Slightly striped, coloring to dull red. Tree moderately vigorous.

CORTLAND. Ripens November to February. Large red fruit similar to McIntosh. Very hardy and desirable as a cross pollinator.

RED MCINTOSH. Ripens in October. Very attractive red Apple of highest quality. Tender, juicy and refreshing. Hardy. Bears young and annually.

No C.O.D.'s. All stock on this page must be paid for in full with order. Shipping charges will be prepaid on 6 or less; 7 or more, express collect. Complete planting instructions included.

YELLOW DELICIOUS. Ripens October to March. Bright golden yellow fruit of excellent quality. Firm, crisp and very juicy. Finest yellow Apple. Bears young and heavily.

RED DELICIOUS. Ripens December to February. Large, dark red Apple with crisp, fine-grained flesh. Excellent flavor.

standard peach

Your choice of selected varieties listed below. Sturdy. (5 to 6 ft.).

	1 to 6 each	7 or more each
	\$2.50	\$2.15

GOLDEN JUBILEE. We recommend this comparatively new, widely planted Peach. It is a real money-maker. Resists excessive cold and is a sure cropper. Early, large freestone with yellow, tender, juicy, sweet flesh. Ideal for home use and roadside market. Ripens August 20 to 25.

HALE HAVEN. Marvelous new Peach. Large, beautifully colored, yellow-fleshed fruit of the highest quality. Ripens 10 days to two weeks ahead of Elberta. Perfect freestone. Good shipper and a heavy bearer. Hardy. Extremely high color before ripening, allowing early picking for distant shipments. Include it in every planting. Ripens September 1 to 5.

EARLY ELBERTA. An excellent new variation on the famous Elberta. A little rounder in shape and about 10 days earlier in ripening. Freestone. Ripens September 6 to 10.

RED HAVEN. New, early Peach, thoroughly satisfactory in every way. It has the fine flavor of South Haven and Hale Haven. When other Peaches are still green, this one is bright red. Hardy; freestone. Self-pollinizing; prolific. Ripens August 20 to 25.

standard pear

BARTLETT CLAPP'S FAVORITE SECKEL

1 Each of These Three Best Varieties (4 to 5 ft.) **THREE** varieties needed for pollination. Postpaid

\$2.50 each, postpaid; 7 or more, \$2.15 each, express collect

3
for
\$6.95

BARTLETT. Well known and adaptable to all situations. Large, golden yellow fruit with a reddish blush. Tender, juicy, with a delicious, musky aroma. The vigorous, long-lived trees attain large size. They start bearing when young and continue annually. Leading commercial and canning pear. Ripens September and October.

CLAPP'S FAVORITE. Precedes Bartlett, which it resembles in size, shape, color and flavor. The first Pear on the market. Large, pale lemon-yellow fruit with brown dots. Fine-textured, juicy, buttery flesh with a rich, sweet, delicate vinous flavor. Hardy and productive. Thrives where other varieties fail. Ripens August 15 to 20.

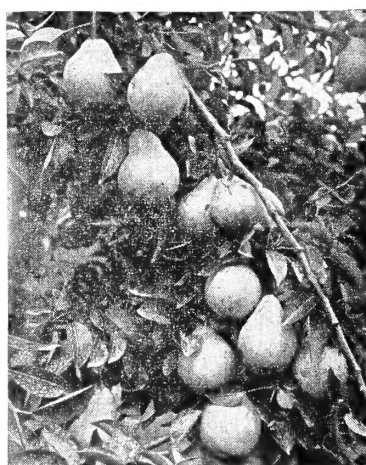

SECKEL. For eating fresh and pickling. Medium size; skin rich yellowish brown with deep brownish red cheek when fully ripe. Flesh fine grained, juicy, sweet. Resistant to blight; very productive and hardy. Plant in fertile soils. Ripens September and October.

5-IN-ONE APPLE

PEACH

PEAR

5-IN ONE APPLE

(5 varieties grafted on one tree)

(1) Red Rome Beauty, (2) Yellow Delicious, (3) Lodi, (4) Cortland, (5) Red McIntosh. Plant several of these novel trees for beauty, shade, and for fruit maturing over a long period.

ALMEY CRAB

FLOWERING CHERRY

FLOWERING TREES

No C.O.D's. All stock on this page must be paid for in full with order. SHIPPED POSTPAID.

PINK FLOWERING DOGWOOD 2 to 3 ft. **\$3.95** **Each**

Outstanding among ornamental trees. A profusion of showy, rose-colored blossoms in spring. Deep red foliage in fall. Grows 15 to 20 feet tall.

WHITE FLOWERING DOGWOOD 3 to 4 ft. **3.25**

One of the most beautiful of all spring-flowering trees. Lovely four-petaled white blooms are borne on spreading branches early in spring. Leaves turn brilliant red in fall. Valuable when used in lawn border or as specimen plants. Unsurpassed for naturalizing effect. Grows 15 to 20 feet tall.

SAUCER MAGNOLIA 2 to 3 ft. **4.95**

One of the most hardy of the Magnolias. Large, fragrant, rose-colored flowers cover the tree in early spring. Blooms when very small. Select a sheltered location so flower buds will not be injured by late frosts. Grows 10 to 15 feet tall. Blooming size.

BECHTEL'S DOUBLE FLOWERING CRAB 3 to 4 ft. **3.25**

This choice Crab has endeared itself to many growers because of its spectacular display of large, double, rose-like flowers in spring which completely hide the branches. Blooms every year. In general it resembles an apple tree but is much smaller and finer branched. It grows in many locations and benefits from the same care given apple trees.

RED FLOWERING CRAB (Malus floribunda) 4 to 5 ft. **3.25**

This small tree is round topped, with single carmine buds that change to pink and then white. Very heavy producer of small, blood-red fruit. Will stand severe winters and drought. Grows 15 to 20 feet.

TREE WISTERIA 3 to 4 ft. **6.95**

No more lovely sight can be imagined than a Tree Wisteria in bloom. The purplish blue flowers completely cover the tree during May, transforming it into sheer beauty. In formal gardens it is indispensable. On the lawn it develops into beautiful specimens and lives for generations, increasing in beauty and dignity each successive season. Grafted, sure to bloom; balled in peat.

PINK FLOWERING CHERRY, Kwanzan 3 to 4 ft. **3.95**

A low tree, growing to 6 feet. It makes a striking appearance on the lawn because of its unique form and is especially attractive when covered with showy clusters of dainty, rose-pink flowers before the leaves appear in the spring.

JUDAS TREE OR REDBUD 3 to 4 ft. **2.75**

Fable tells us that when Judas betrayed Christ this tree immediately dripped all over with drops of blood, and that is the way it looks today when its blooms first come out. Later they turn to beautiful rosy purple. Blooms in April, before the leaves appear. 15 to 20 feet tall at maturity.

PURPLE FRINGE (Smoke Tree) 2 to 3 ft. **2.50**

A tree much admired for the curious fringed or hair-like flowers that cover it in midsummer and give a mystic, cloudy effect to the whole tree. Handsome foliage adds its share of beauty. Likes plenty of sunshine and light, well-drained soil. Grows to a height of 10 to 12 feet, and its spreading habit requires considerable space.

TREE HYDRANGEA 3 to 4 ft. **3.95**

Large pyramidal trusses of pure snow-white blooms appear in early August. As fall approaches they change to a luminous pink. At this stage they may be cut for all-winter dry bouquets. Flowers measure a foot long and 6 to 8 inches wide. A low-growing tree, standing not more than 4 to 6 feet in height.

PAUL'S SCARLET HAWTHORN 4 to 5 ft. **4.75**

Lovely flowering shrubs or small tree, growing about 15 feet tall, with spreading branches. The leaves are broad, the 3 to 5 lobes much toothed. The large clusters of double, brilliant rosy red flowers are produced in immense quantities. Fruits are scarlet. Well suited to the small yard, where a maple would be too large or create too much shade.

RED JAPANESE MAPLE 1 to 1½ ft. **6.50**

Grows no taller than 8 to 10 feet. Foliage is startling crimson all summer. Makes an excellent specimen for yard or formal garden. Has best color when in full sun, but will tolerate moderate shade. Trees moss balled.

ALMEY FLOWERING CRAB 4 to 5 ft. **3.95**

An outstanding Flowering Crab that bears dollar-size flowers of rich, glistening, fiery crimson in spring. This graceful tree thrives in poor soil and is perfectly hardy in cold sections. Only 12 to 15 feet tall but vigorous. Attains its mature height quite rapidly and blooms young. It thrives in full sun or partial shade. Recommended for small gardens. Profuse, small scarlet fruits cling to the branches long after the leaves have dropped.

\$1.00 Discount

On any group of 4 Flowering Trees listed on this page, deduct \$1.00 from total list price for 4 trees.

FLOWERING SHRUBS

2-Year, No. 1 Blooming Size, 1½ to 2 feet tall.
Hardy, well-branched shrubs, shipped postpaid

CALYCANTHUS (Sweet-Scented Shrub)

Many know it as the Carolina Allspice. The handsome, bronze-chocolate flowers produced in June are most entrancing, because of their spicy fragrance. Odd-looking pods develop, which are filled with brown, aromatic seeds. Glossy corrugated foliage adds to its unusual appearance. Grows 4 to 6 feet tall and spreads over an area equally broad.

Double GOLDEN KERRIA (Globe-Flower)

Button-like, golden flowers cover the bush all summer. The very dense, "sawtooth" foliage serves as an interesting background. In winter the light green, twiggy stems are very decorative. Grows 3 to 5 feet tall.

RED FLOWERING QUINCE

Covered with masses of semi-double, brilliant scarlet flowers in spring, even before the attractive, shiny green leaves appear. This 3 to 5-foot shrub is a "must" in landscaping.

BEAUTY-BUSH

A magnificent flowering shrub, growing to 7 feet. Upright-growing branches arch gracefully outward. During June they are weighted down with pink, bell-like flowers. Hardy; any soil.

DOUBLE MOCK-ORANGE

Pure white, sweet-scented, double, 2-in. flowers in May and June. Will tolerate smoke and other hard city conditions. Grows to an ultimate height of 4 to 6 feet.

SWEET HONEYSUCKLE (Lonicera tatarica)

Dainty, small, pink, trumpet-shaped flowers in May, followed by a profusion of red berries. Makes a large shrub, 6 to 8 feet in both height and width. Excellent for screening and specimen planting. Grows in the poorest soil.

CARDINAL SHRUB (Weigela Vaniceki)

Blooms in spring, summer and fall. Plants set out in fall will bloom the next season. Grows 6 feet tall. Produces large, trumpet-shaped, rosy red flowers.

PEEGEE HYDRANGEA

A tall, stately shrub growing 4 feet in height. Branches bend over with giant, cone-shaped flowers which are white at first, then pink, and late in fall turn to copper and bronze. When cut, they last for weeks indoors.

FORSYTHIA, Spring Glory

A new Forsythia which bears masses of large yellow blooms. Canes grow erect, with gracefully drooping tips. Hardy in all sections; ordinary soil.

RED SPIRAEA

A choice, low-growing shrub, distinctive in style and form. Masses of showy, bright crimson flower clusters from July to frost. Ultimate height 18 to 24 inches.

Most have 2 or more runners.

PACHYSANDRA TERMINALIS (Spurge)

Very best evergreen ground cover; hardy, thrifty.

1-yr. Plants 3-4 in. 9.00 \$80.00

Mass of roots, 2-3 leaders to each plant. Heavy cuttings, well leaved.

HALL'S HONEYSUCKLE (Creeper or Climber)

Rapid growing vine with beautiful foliage. Good ground cover. Flowers are very, very fragrant and abundant. Used mostly for bank cover. OUR STOCK THIS YEAR IS THE BEST.

Medium, Lining Out Grade 7.00 35.00

2-yr. Heavy Transplants. No. 1. . . . 20.00 125.00

MYRTLE (Evergreen Ground Cover)

Per 100 Per 1000

Vinca Minor, Periwinkle. One of the best ground covers, small shiny evergreen leaves, and violet-blue flowers in spring. Thrives in shade. Especially valuable for planting under trees or in other shaded spots where grass will not grow. Plant 1 foot apart.

Medium, Lining Out Grade \$8.00 \$35.00

Heavy, Lining Out Grade. 11.00 55.00

BITTERSWEET (Deciduous Climber or Ground Cover)

Celastrus Scandens. Showy clusters of orange-red berries for winter bouquets. Sun or shade in any soil. Attracts birds.

12-18 in. 14.00 65.00

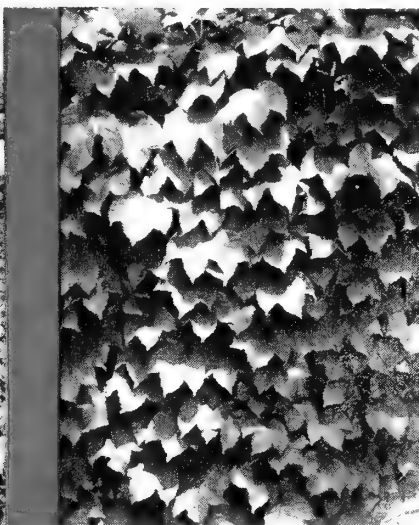

VIRGINIA CREEPER (Vine and Ground Cover)

Ampelopsis Quinquefolia. A splendid ground cover, especially on sandy soils where no other vegetation will grow. Unsurpassed in beauty by any other vine in autumn when the leaves turn to the most vivid tones of crimson, scarlet and orange. Plant 3 feet apart.

1-yr. Plants 6-12 in. 20.00 95.00

2-yr. Extra Heavy Plants. 12-18 in. 40.00 200.00

PLANT CLIMBING VINES AND
GROUND COVER 1 to 1½ FEET APART

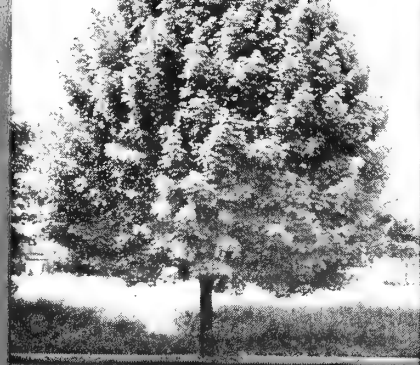

PACHYSANDRA—Excellent in masses under heavy shade of trees. A dense, lustrous evergreen, trailing vine type of ground cover. It thrives under evergreens or anywhere. If planted 8 to 12 inches apart it will give a pleasing effect immediately and in two years' time forms a solid ground cover. Prefers shade; any soil, water liberally. It is VERY HARDY. Grows in sun or shade, 6 to 8 inches tall. Fine for terraces or any place where grass is not successful.

ENGLISH IVY—One of the very best EVERGREEN CLIMBING VINES and GROUND COVERS. Popular close clinging vine. Rich, dark green, glossy, three-lobed leaves make dense covering especially on brick or stone walls. Thrives in any good soil and under smoky city conditions. Is evergreen the year 'round. For walls, fences, etc. Especially desirable beneath shrubbery.

Many items of larger stock are available balled and burlapped,
for pick-up at the Musser Nursery during the packing and shipping season.

Sorry, no C.O.D.'s. All stock on this page must be paid in full with order.
Shipped Express Charges Collect.

	Actual Size	Each	Per 3
PIN OAK	5-6 ft.	\$6.00	
Forms a symmetrical, pyramidal head with long pendulous branches. The foliage is deeply cut and assumes a brilliant red autumn color. Because of rapid growth, it is much used for avenues and lawn specimens.			
WHITE BIRCH			
Clump trees, 3 to 4 stems.....	3-4 ft.	3.95	\$9.95
One of the most beautiful novelties in shade trees. When mature, bark is white and the leaves are a fine light green. Plant several in each location for a rare and picturesque clump, winning the admiration of your friends and neighbors.			
CHINESE CHESTNUT (Blight resistant)			
Whips to lightly branched.....	3-5 ft.	2.00	5.00
Heavy, well-branched trees.....	3-4 ft.	3.75	9.75
Will bear large, sweet, delicious nuts 2 years after planting. Very fast growing. Valuable as ornamental and for shade, as well as for fruit. Plant 2 or more for pollination. Grows 30 to 40 feet tall. See photo at left.			
WEeping WILLOW, Wisconsin	6-8 ft.	3.95	9.95
Very rapid-growing tree with graceful drooping branches. Will succeed in any location but prefers moist soil. Especially effective near pools or river banks, along drives or as specimen plants. Frequent cutting back gives a thicker growth of bright green twigs. Grows 25 to 30 feet tall. Illustrated at left.			
NORWAY MAPLE	6-8 ft.	5.50	14.75
One of the best trees for street planting or for lawn specimens where good form and shade are needed. Its dense leaves are rich green and are held on tree about two weeks longer than other Maples. Grows 50 to 60 feet tall. See photo at left.			
SILVER MAPLE	5-6 ft.	3.75	9.75
Most rapid grower of all Maples. A large, spreading tree which, at maturity, has a height of 60 to 70 feet. A cut leaf with a silvery cast, and also a silvery bark. Sap is good for sugar making.			
SUGAR MAPLE (Hard Maple)	6-8 ft.	5.50	15.75
Brilliant scarlet, orange and yellow foliage in fall. Mature trees are the source of delicious maple sugar from sap in spring. Handsome form. Photo on next page.			
CRIMSON KING MAPLE	5-6 ft.	6.50	18.50
You will want to be one of the first to own this new tree. It is a beautiful form of Schwedler Maple, originating in Europe. Like the Schwedler, it develops a rounded, compact top of unusual symmetry, but differs in having foliage of deep purple-crimson all through the growing months.			
CUT-LEAF WEeping BIRCH (Silver Birch)	4-5 ft.	4.50	12.75
Graceful white-barked tree with delicate drooping branches. One of the few shade trees under which grass will grow. The white bark, which develops a year or two after planting, is beautiful in all seasons. Grows 20 to 30 feet tall.			
LOMBARDY POPLAR	5-6 ft.	1.50	4.00
Tall columnar tree, ideal for use as screen or windbreak. Thrives in wide range of soil and climatic conditions. Grows unusually fast; requires no pruning. Grows 60 to 80 feet. Photograph is shown on the next page.			
		10 for \$8.00	100 for \$65.00
CHINESE ELM	6-8 ft.	4.25	11.50
For quick shade. A very rapid grower with small, dense foliage. Excellent for tall hedge or windbreak. Stands intense cold and extreme heat remarkably well. Excellent shade in 5 short years. Grows 30 to 40 feet.			
SUNBURST GOLD LOCUST (Trade-marked)	4-5 ft.	6.75	18.50
(Plant Pat. 1313.) New shade tree with brightest golden bronze foliage on 8 to 10 inches of branch tips. Completely free of thorns and resistant to insects. Well formed, with spreading habit; 25 to 35 feet. Supply this year definitely limited.			
MORaine LOCUST (Trade-marked)	5-6 ft.	6.50	18.50
(Plant Pat. 836.) This is a vigorous, fast-growing, seedless tree, shaped much like American Elm, but not susceptible to disease. A clean tree with no ugly, dangerous thorns and no seed pods. The leaves are so fine that, when falling, they practically disappear. Thrives in spite of smoke and soot, on all kinds of soil. Hard wooded; bends but rarely breaks or splits.			
BLACK WALNUT	3-4 ft.	3.75	9.75
Rich flavorful kernels. Does well in fertile, well-drained soil. Very hardy. Grows almost anywhere in the country. Produces annually large crops of nuts with rich, oily kernels of fine flavor. Fine for desserts, nut bread and confections. Tree grows 25 to 40 feet high; fast growing and long lived. Photo on next page.

14 — Musser Forests, Inc.

ONLY THROUGH MANY SATISFIED CUSTOMERS

TERMS

No order can be accepted for less than units of fifty (50) of one variety and size except on items marked with an asterisk (*). Fifty (50) of one kind and size sold at 100 rate, 500 at 1000 rate, shipped, f.o.b. Indiana, Pa., by express or parcel post collect, whichever is cheaper (unless otherwise noted). If charges prepaid items and charges collect items are shipped together, entire shipment is charge collect. Prices subject to change without notice.

If your stock is not received in satisfactory condition, please advise immediately. We will make every effort to fill your order exactly as you want it, but if we are sold out of a variety you ordered, we may substitute a similar variety, of equal or greater value, if you indicate your permission on our order blank.

Orders may be booked with one-half cash with order, balance C.O.D. Fifty (50) cents packing charge on less than 1000.

All prices NET, no discounts for cash or quantity. WE PACK AND BOX FREE in 1000 lots.

We do our best to ship stock to arrive at destination on a specified date. Orders accepted on this basis. However, due to varied weather conditions, during our shipping season, we cannot guarantee always to have trees at destination ON A DEFINITE DATE.

SHIPPING SEASON

will begin about March 15, weather permitting, and continue until June 1. Orders will be filled as rapidly as possible from then on. All stock shipped in a dormant condition and may be safely transplanted in any part of the country, regardless of your season.

PARTIAL SHIPMENTS

It may be necessary to ship Fruits, Flowering and Shade Trees at a time different from other listed stock. You may receive several shipments before your order is completed. This notice is to save you unnecessary correspondence.

The figures 2-0, 2-1, 2-2-1 indicate the number of years the trees have been in the seed beds and the transplant beds. Thus the sum of all figures is the total age of the tree.

Number of Trees Required per acre

For different spacings

3 x 3	4,840
4 x 4	2,722
5 x 5	1,742

For Christmas Tree planting, estimate 2000 trees per acre.

AUSTRIAN PINE

Good timber species. A beautiful, dark green, long-needled Ornamental and Christmas tree, grown from selected seed from the Austrian Alpine region.

Per 100 Per 1000

2-yr. Seedlings.....(2-0) 3-6" \$5.00 \$25.00

LANDSCAPING ORNAMENTALS

These items are two and three times transplanted, and two and three times pruned. This stock is not to be confused with small seedling trees. They will develop rapidly into a beautiful evergreen foundation planting or valuable specimens.

Due to wrapping and shipping problems, we must ship lots of 5 or more, but the items may be assorted, your choice of any 5 plants, as indicated by asterisk(*).

FRASER FIR

Often called Southern Balsam Fir. Shiny green foliage is lighter on under side. Has delightful fragrance and attractive purplish cones. Hardy. Good ornamental or Christmas Tree. Sheared and pruned three times to develop a nice bushy tree.

*12-15 in. each \$1.50
*18-24 in. each 2.00

*Sold in lots of 5 or more. Packed with ball of peat moss.

CONCOLOR FIR (White Fir)

The blue-green or blue-white needles make an excellent color contrast when planted with other evergreens. One of the best Firs for northern gardens. Hardy, fast growing. Sheared and pruned three times to develop a full, bushy tree. Requires good drainage.

*10-15 in. each \$1.50
*12-18 in. each 2.50

*Sold in lots of 5 or more. Packed with ball of peat moss.

CANADIAN HEMLOCK

Lacy, graceful growing habit. One of the best plants for hedges, since it can be sheared to any size. Can be kept low for years, or permitted to grow into a high hedge or windbreak. Can be planted in sun or shade.

*10-14 in. each \$1.25

*Sold in lots of 5 or more. Packed with ball of peat moss.

Beautiful specimen Canadian Hemlock

From Musser Nursery No. 2, part of which is shown above, over 28,000,000 seedlings were shipped in 1957.

MUGHO PINE, SHEARED

LANDSCAPING

GLOBE ARBORVITAE

Very compact. Dwarf, round, globe-shaped ornamental for under windows and where low growth is desirable. Twice transplanted and three times sheared. Excellent bushy plants.

Hovey's—Green

*10-12 in. height,
10-12 in. spread each \$2.00

Woodwardi—Dark green

*12-14 in. height,
12-14 in. spread each \$2.25

*Sold in lots of 5 or more.
Packed with ball of peat moss.

JAPANESE YEW

Deep rich green foliage. Sun or shade. Successful where many ornamentals will not grow. Beautiful, upright or spreading types. This Yew can easily be sheared for hedges. **Considered the leading ornamental evergreen by landscape specialists.**

Upright (Bushy, heavy)

*12-15 in. each \$2.50

Spreader

*12-15 in. (spread) each \$2.50

*Sold in lots of 5 or more.
Packed with ball of peat moss.

JAPANESE HOLLY

(Evergreen Shrub Type)

True strains from rooted cuttings. Unusually good ornamental form, twice as broad as high. Nicely branched for specimen plants. Withstands shearing well when used as hedge. Excellent evergreen hedge or individual specimen plant.

Ilex rotundifolia.

(Round-leaf Holly)

*12 in. (spread) each \$1.75

*Sold in lots of 5 or more.

Packed with ball of peat moss.

Ilex crenata Hetzi. Large, shiny, convex leaf.

*12-15 in. each \$1.75

*Sold in lots of 5 or more.

Packed with ball of peat moss.

MUGHO PINE

A compact, low-growing Pine that can be used in foundation planting, as a hedge or low-growing ornamental.

(Twice Transplant
Field Grown)

*8-12 in. (spread) each \$1.25

*Sold with a lot of 5 or more.

Packed with ball of peat moss.

NORWAY SPRUCE

Very hardy. Most rapid-growing and popular Spruce. Should be sheared when making rapid growth to insure bushy trees. Needles about 1 inch long. Specimen individual trees or evergreen hedge. Small ornamental sizes.

*12-18 in. Each \$1.00

*18-24 in. Each 1.50

*24-30 in.. Each 2.50

*Sold with a lot of 5 or more. Packed with ball of peat moss.

COLORADO BLUE SPRUCE

Excellent stock—finest in the country. One of the finest for ornamental and Christmas Tree use. Sturdy and compact in form; straight stems. Range in color from slightly blue-green to marvelous blue. The seed has been collected at very high cost from trees showing only the best characteristics. Rather slow growing. If moist, will grow well on sandier or heavier soils than most Spruce.

*10-12 in. Each \$1.00

*12-15 in. Each 1.50

*16-20 in.. Each 2.00

*Sold with a lot of 5 or more. Packed with ball of peat moss.

COLORADO BLUE SPRUCE

NORWAY SPRUCE

ORNAMENTALS

PIERIS JAPONICA

An excellent, broad-leaf evergreen. Young foliage is usually rich bronze in spring, later turning light green. Creamy white flowers in pendulous clusters to 5 inches long. Can be grown in shade or sun.

*8-12 in. each \$1.75
*15-18 in. each 2.50

*Sold in lots of 5 or more.
Packed with ball of peat moss.

JUNIPERS

Fast growing, hardy evergreens, extensively used in all types of landscape work.

Thrives in wide range of soil and climatic conditions. Grows unusually fast, requires no pruning.	18-24"	12.00	60.00

TULIP POPLAR

One of the largest, most valuable deciduous trees for timber and ornamentals. Glossy, fiddle-shaped leaves. Large greenish-yellow and orange flowers. Very symmetrical.	12-18"	17.00	85.00
	24-36"	20.00	100.00

PIN OAK

One of the best shade trees known; of rapid growth. Leaves deeply cut and colors beautiful in autumn. Transplants readily.	18-24"	12.00	60.00
	24-36"	20.00	100.00

For best protection, plant double rows about 6 feet apart with offset spacing.

White Pine, Austrian Pine and Scotch Pine are among the faster growing evergreens for **WINDBREAKS**. Plant double rows about 6 feet apart with offset for spacing best protection.

LOMBARDY POPLAR is well known as an effective screen for buildings, accent for entrance drives, or a background where terrain lacks novelty. Grows rapidly and thrives readily.

HOW TO PLANT

How to Handle upon Arrival (Trees and Shrubs Bare Rooted)

When your shipment arrives *unpack at once*. Thaw out gradually in its packing if it arrives frozen. If dried out in transit, soak entire plant in water for a few hours or bury in wet soil.

Plant at once if possible. If weather is too cold for planting, put the box or bundle in a cool but frost-proof place. It is best to unpack, sprinkle tops and all with water, cover roots with damp packing and cover with sacks or canvas. If weather is warm and you are not ready to plant, heel the stock in.

Balled material same as evergreens, pages 4 and 5.

Potted and Container material. Place containers in a sheltered location and keep watered until time of actual setting out.

Heeling-in Trees and Shrubs (Temporary Planting)

Heel-in your trees where they will be protected from sun and wind, and their development will be retarded. Remove all packing material or grass that might harbor mice. Spread out roots and fill in with pulverized earth firmly over roots. Keep earth moist.

To Prepare Ground

Soil may be prepared by deep spading or plowing but on hillsides subject to wash, or in lawns, set in well dug holes in sod. For good growth spade two or three feet around the plant and keep this area cultivated or mulched. Make hole large enough to avoid crowding of roots. 6" or 8" of space should surround balled or container material. Soil at bottom of hole should be

loosened to 8" depth. Provide good soil and humus (peat moss, leaf mold, rotted cow manure) mixed for back-fill. Fertilizing newly set material is not advisable.

How to Plant Evergreens

(1) Dig hole a foot larger and deeper than ball of earth. Provide good, loamy top soil to fill around ball.

(2) Set tree in hole trifle lower than it stood in nursery.

(3) Fill good top soil up around ball. Pack firmly with feet or settle by filling hole with water.

(4) Burlap may or may not be rolled back.

(5) Fill hole with soil. Pack with loose earth, or a humus mulch. Peat moss or other humus generously incorporated through the fill back soil will encourage root growth.

How to Plant Bare Root Stock

In planting, dig generous sized holes with perpendicular sides (never saucer shape). Put the good surface dirt to one side to be used around the roots. Loosen up the soil in the bottom of the hole. Set trees one or two inches deeper than they stood in the nursery; set shrubs at about the same depth they stood in the nursery or slightly deeper. Spread roots out naturally and work soil over and around them. Keep putting in good dirt with alternate layers of peat or compost until the hole is nearly full, tramping the dirt firmly about the roots. Fill the hole with water. Finally fill up the hole with loose dirt which should not be tramped, leaving a saucer-like depression to retain water. A 2" mulch of peat or strawy manure on top is beneficial. Do not fertilize until second year when feeding roots are established. Water evergreens thoroughly in late fall before ground freezes.

Shade Trees. Prune away about one-third to one-half of top depending upon the number of roots lost in digging. Prune to keep the normal shape of the plant. Cut just above a bud or close to a twig, branch or trunk. Remove small and crowding branches and try to form a well developed head with a strong leader and branches at wide, not close angles. Never cut out the central leader. Cut off all broken roots. Plant as directed. Trees over 8 ft. tall should be staked or guyed to brace them against wind pressure. Run wires through loops of rubber hose to avoid cutting into bark. Some smooth barked tree varieties need wrapping with good commercial tree wrap to prevent sun scald.

Fruit Trees. With branched fruit trees as Peach, Cherry, Plum, Apple and Pear Trees, select three to five side branches on different sides of the trunk and 6 to 8 inches apart and cut back one-third their length. Select one of the top upright branches and cut it back in proportion to the side branches. Cut off all other branches close to the trunk.

With Fruit Tree Whips having no side branches, simply cut off the top just above a bud 2 to 2½ feet from the ground.

Protect young fruit tree trunks from rodent and rabbit damage with collars of hardware cloth 6"-8" in diameter and 2' high.

Dwarf Fruit Trees. Plant with bud union at least 4 inches above the ground. Trunks should be tied to permanent stakes.

To plant follow same procedure as given previously.

Shrubs. Cut off damaged or frayed roots before planting. Thin out tops of many branched shrubs, removing the old wood. Cut tops back one-third to one-half. Never allow roots to become dry.

To plant follow same procedure as given above.

WITHOUT . . . AND . . . WITH
It DOES make a DIFFERENCE

RA-PID-GRO

The Miracle Plant Food

Ra-Pid-Gro is a complete, concentrated plant food. It speeds up growth of plants now in place, and assures more successful transplanting of new plants.

1 pound	Ra-Pid-Gro	(makes 22 gals.)	\$1.30	postpaid
2 pounds	Ra-Pid-Gro	(makes 44 gals.)	2.50	postpaid
5 pounds	Ra-Pid-Gro	(makes 110 gals.)	4.75	postpaid
10 pounds	Ra-Pid-Gro	(makes 220 gals.)	9.00	postpaid
25 pounds	Ra-Pid-Gro	(makes 550 gals.)	21.00	postpaid

Use for—

- EVERGREENS • SHRUBS
- SHADE TREES • ROSES

Also for Lawns, Perennials,
Vegetables, House Plants

HOW IT IS USED

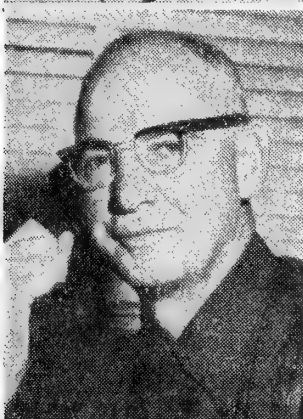

Just add water at the rate of 1 lb. of Ra-Pid-Gro to 22 gallons of water. It is ready to use as soon as it dissolves. For a small number of plants, mix at the rate of 1 teaspoonful to a quart of water.

35,000,000 TREES A YEAR and still growing

With more than two decades of nursery operation behind us, we are pardonably proud of our modern buildings, our up-to-date equipment and our excellent staff. All these factors of efficiency, added to our years of experience, enable us to offer a tremendous volume and selection of first-quality nursery stock.

Our growth reflects our integrity; you can buy with complete confidence.

Sincerely,

A handwritten signature in cursive script, reading "Fred Musser".

Hedges. Plant small shrubs which are to form a hedge less than 2 feet in height 10 to 12" apart on centers. Medium sized bushes 12 to 18" apart on centers. Set tall shrubs or trees for high hedges 2 to 4 feet apart. For the latter it is often more practicable to dig individual holes than to set by the trench method. A double staggered row of plants makes the most effective hedge.

Prune tops back to 6"-12" above the ground. Each spring the hedge can be trimmed back to the desired height and width. Frequent trimming during early summer will make the hedge grow dense. Trim both the sides and the top or else hedge will grow wider at the top and become open at the bottom.

Care After Planting

Pruning Trees and Shrubs. After trimming back and pruning the limbs of ornamental trees, when planting, they need only enough trimming to shape them properly. Low side limbs should not be removed to raise the head until after two season's growth, when they may be gradually removed until the head is at the desired height. Shrubs may need heading-in if the limbs are getting out of bounds and the older wood occasionally cut out to keep them in the proper form. The general rule is to trim fall blooming shrubs, like hydrangeas in the early spring, and spring blooming shrubs, like spireas, in the spring and summer directly after they have bloomed.

Cultivation. Frequent shallow cultivation will control weeds and produce

a dust mulch to conserve much needed moisture in the soil. That is the most practical method of handling larger plantings. In the orchard it is best to cultivate around young trees for several seasons.

Mulching. For ornamental trees and shrubs on the home grounds a mulch of peat, grass clippings, strawy manure, marsh hay or compost may be used instead of a dust mulch.

Watering. Artificial watering of new plantings during dry spells is necessary for several years. Water thoroughly. Do not sprinkle. Give the plant all the water the soil about it will take at one time.

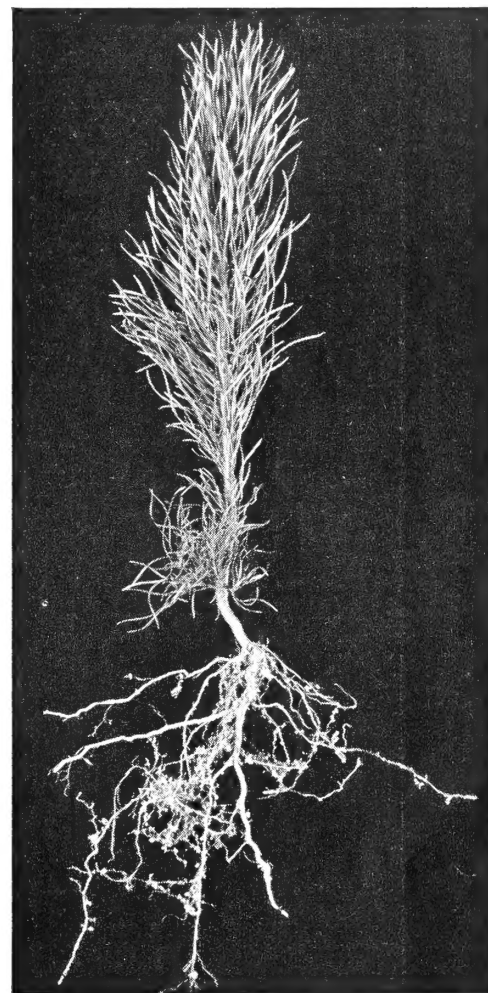

Fertilizing. After the first year, fertilize regularly. Barnyard manure is excellent when obtainable. One-quarter pound of a commercial nitrate fertilizer per year of growth, broadcast under the spread of the branches in spring, is excellent. On bearing fruit trees, make application from two to four weeks before bloom. Small fruits and shrubs respond to the same treatment.

Insect Pests

Spraying is especially important in the production of high class fruit in the home orchard. Success depends upon a thorough application of the right material at the proper times. To accomplish this one must become familiar with the insects or diseases that infect the orchard. Consult us for your spraying problems.

Plant Diseases. Good culture and sanitation will aid materially in preventing plant diseases. Use disease resistant varieties and well grown stock. Keep your plants healthy with adequate food, water and soil building. Destroy infected or harboring material. Control insects which spread disease by spraying.

Don't take chances with Inferior Stock

100 EVERGREEN HEDGE

American Arborvitae

These are sturdy 3-yr. seedlings, 8 to 12 inches high. This offer will give you enough trees to plant 100 feet of hedge. Can also be used in the foundation planting or as a specimen.

100 POSTPAID
 at Planting Time for **\$8.95**

ROSE HEDGE **ROSA MULTIFLORA THORNY TYPE**

A Living Fence — A Winter Paradise for Wild Bird Life

ROSA MULTIFLORA is a tall growing, very thorny shrub, like the wild rose. Very hardy even in poor soil. Grows 2 to 3 feet in a single season to an ultimate height of 6 to 8 feet. Ideal for use as living fence for farm use—keeps in cattle, horses, SHEEP and GOATS. Makes fast growing ground cover. Pinkish white blossoms literally cover plant in June. These are followed by profusion of large red berries which attract game birds such as grouse, pheasant, and partridge, as well as smaller birds. During winter its arching branches provide protection from snow and cold as well as food for birds.

ROSA MULTIFLORA JAPONICA, thorny type, **BEST QUALITY, EXTRA HEAVY**, 3 millimeter (tops sheared, anything under 3 millimeter graded out).
